# From Snowflake Servers to Snowflake Clusters

## Our GitOps Journey

Allison Richardet & Fabio Giannetti

# Topics

Europe 2019

- Security
- Common workloads
- GitOps

# Patterns & Snowflakes

KubeCon

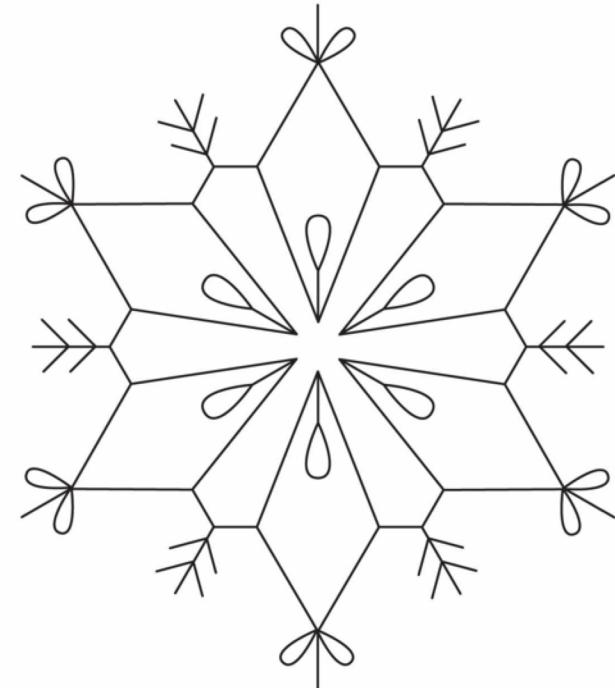

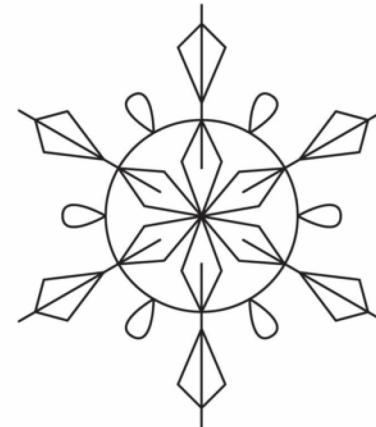

CloudNativeCon

Europe 2019

Difficult to Reproduce

Hard to debug & test

Lack of audit trail

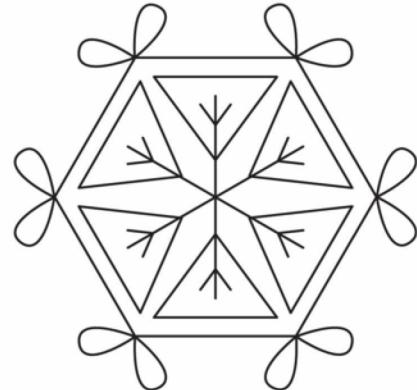

© Mollie Johanson

Change/upgrades problematic

Instances out of sync

Environment mismatch

# Problem

KubeCon

CloudNativeCon

Europe 2019

- Application teams need to move legacy applications to containerized workloads
- Constraints
  - Region requirements
  - Security concerns
- Developer and Operator experience

# Vision

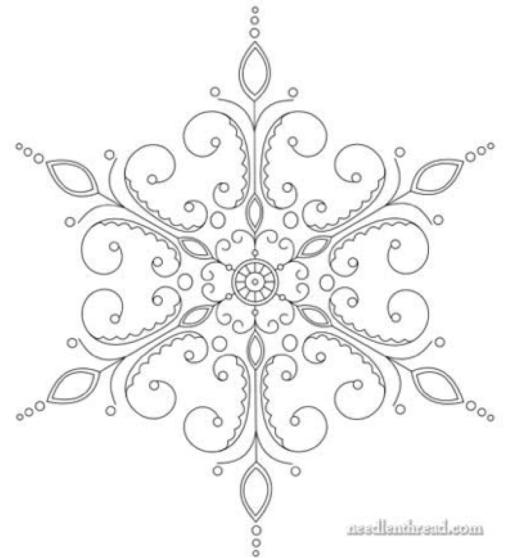

KubeCon

CloudNativeCon

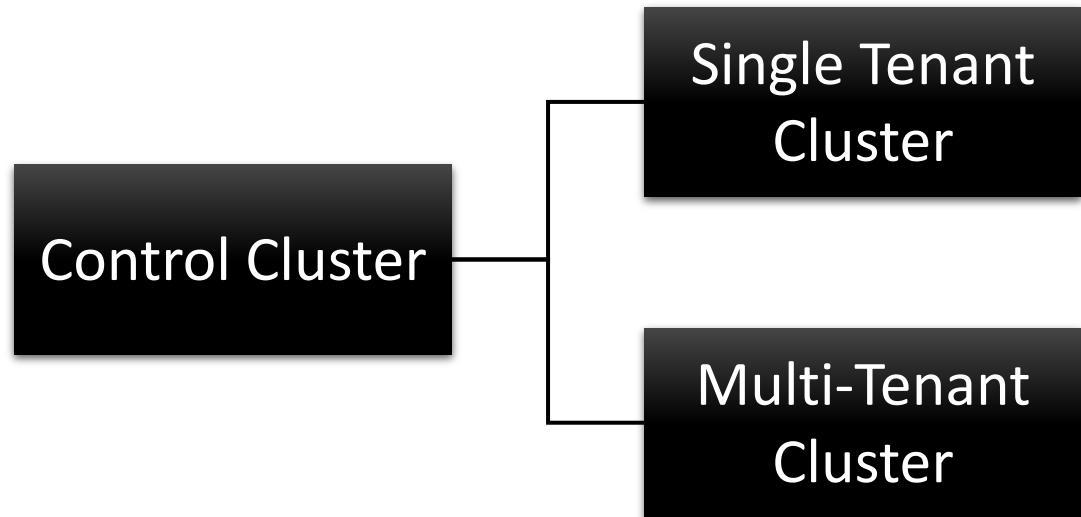

Europe 2019

- Security
  - Multi-tenancy
- Common services based on patterns
- Structured onboarding for tenants

# How

- Manage different types of clusters
- Automated deployments & base services
- Tenant Workloads – options & customizations

# Timeline

KubeCon

CloudNativeCon

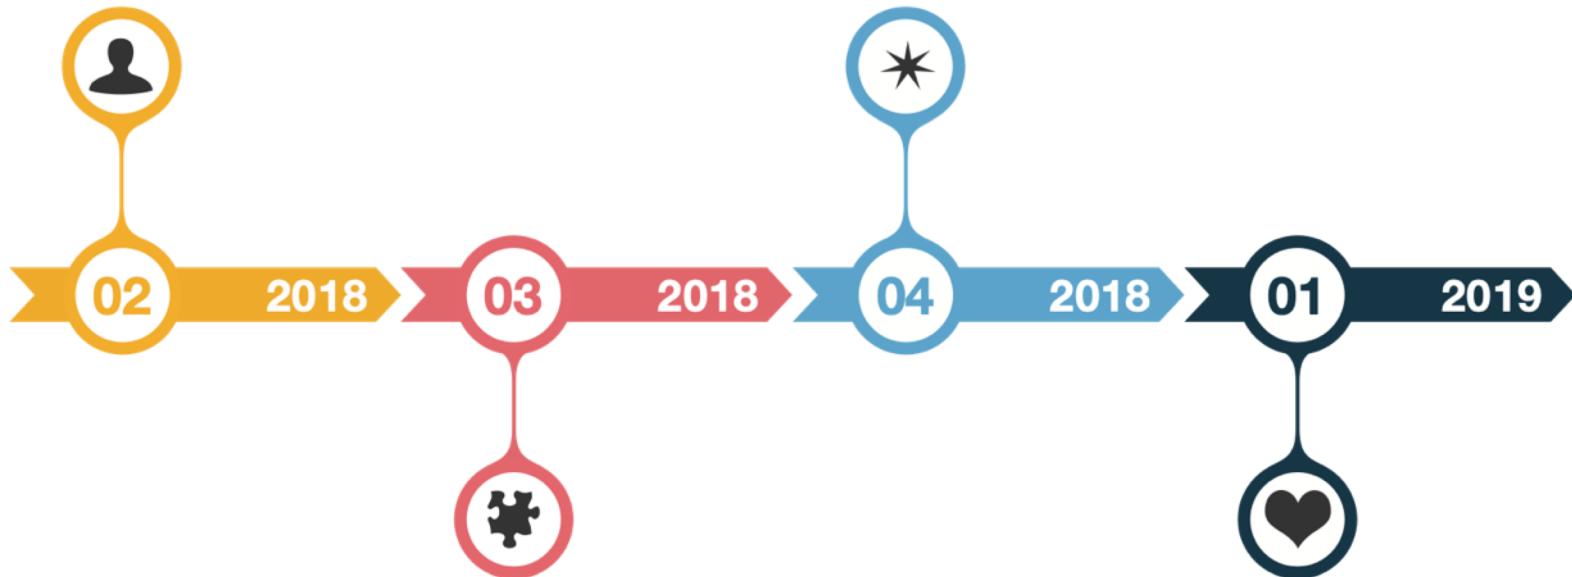

Europe 2019

## Introduce Kubernetes

Introduction to application teams  
Excitement in technology &  
Ability to control deployments

## Snowflake Prevention

Consolidate base services  
Automation  
Scalable, Redundant & Secure

## Complexity

Application teams overwhelmed  
Difficulty navigating technology

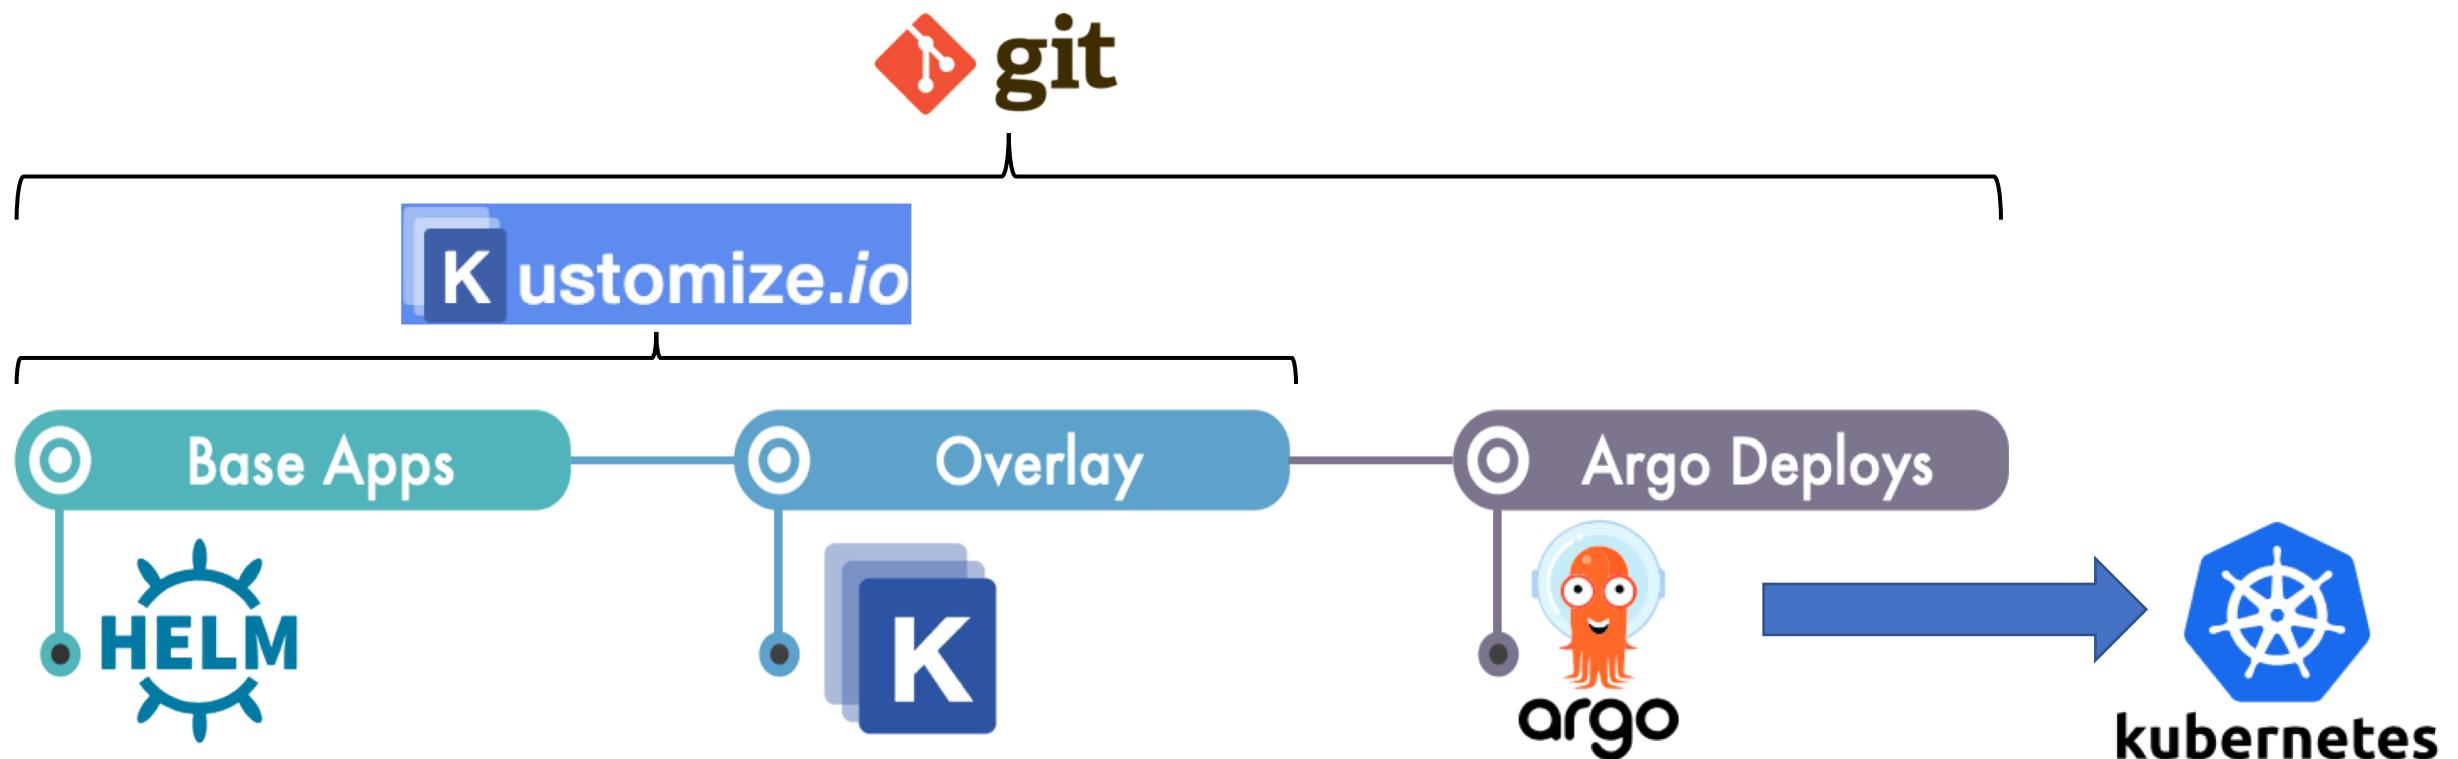

## Tenant Management

Tenant Isolation  
Extend base services  
Custom dashboards

# GitOps

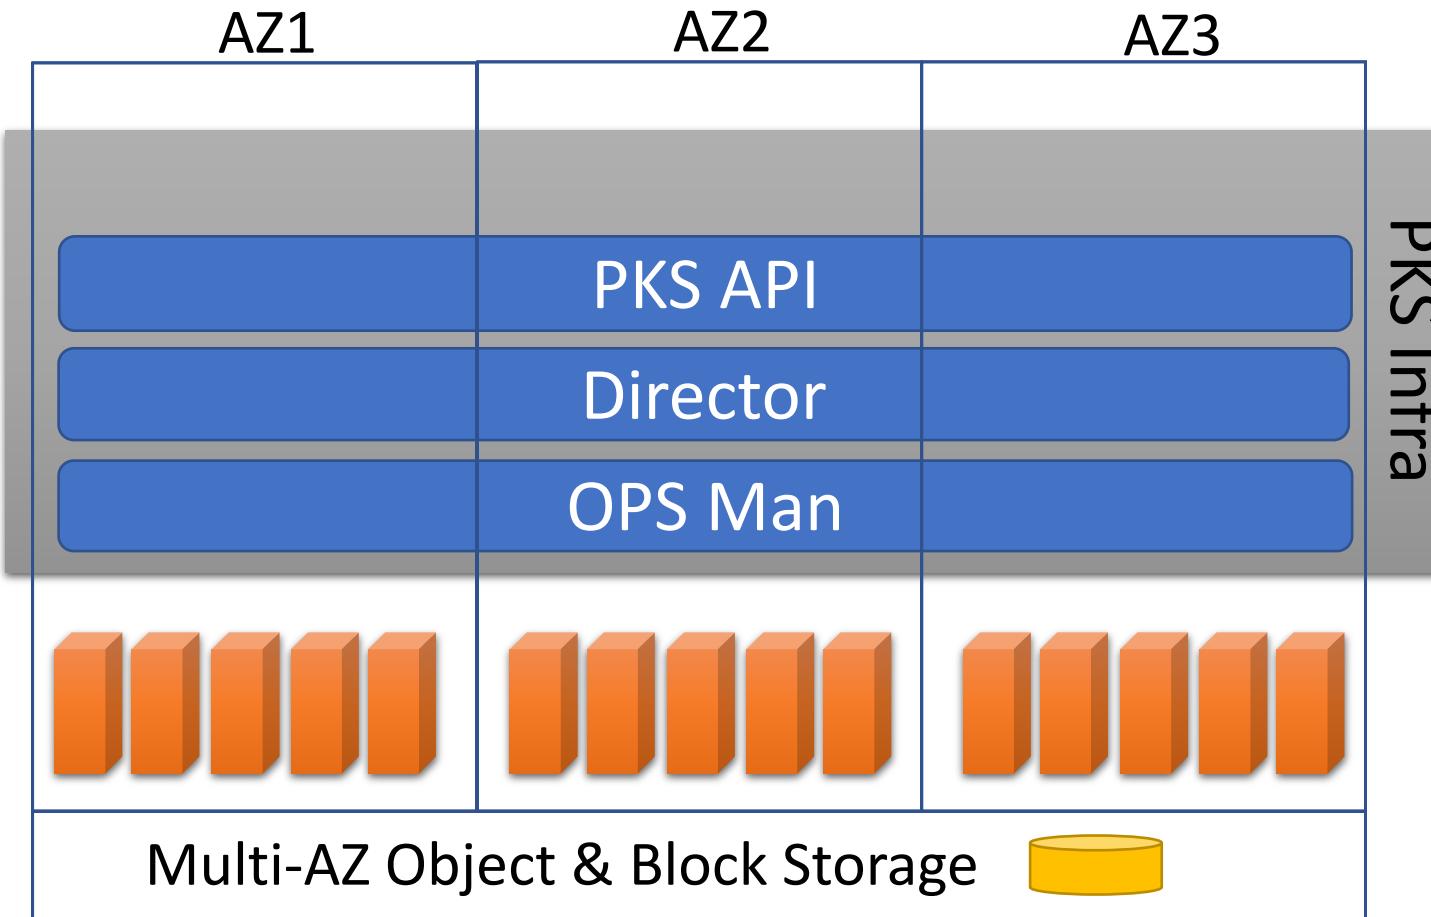

- Store state in Git – source of truth
- Manage deployments from Git
- Argo CD ensures the cluster state matches Git

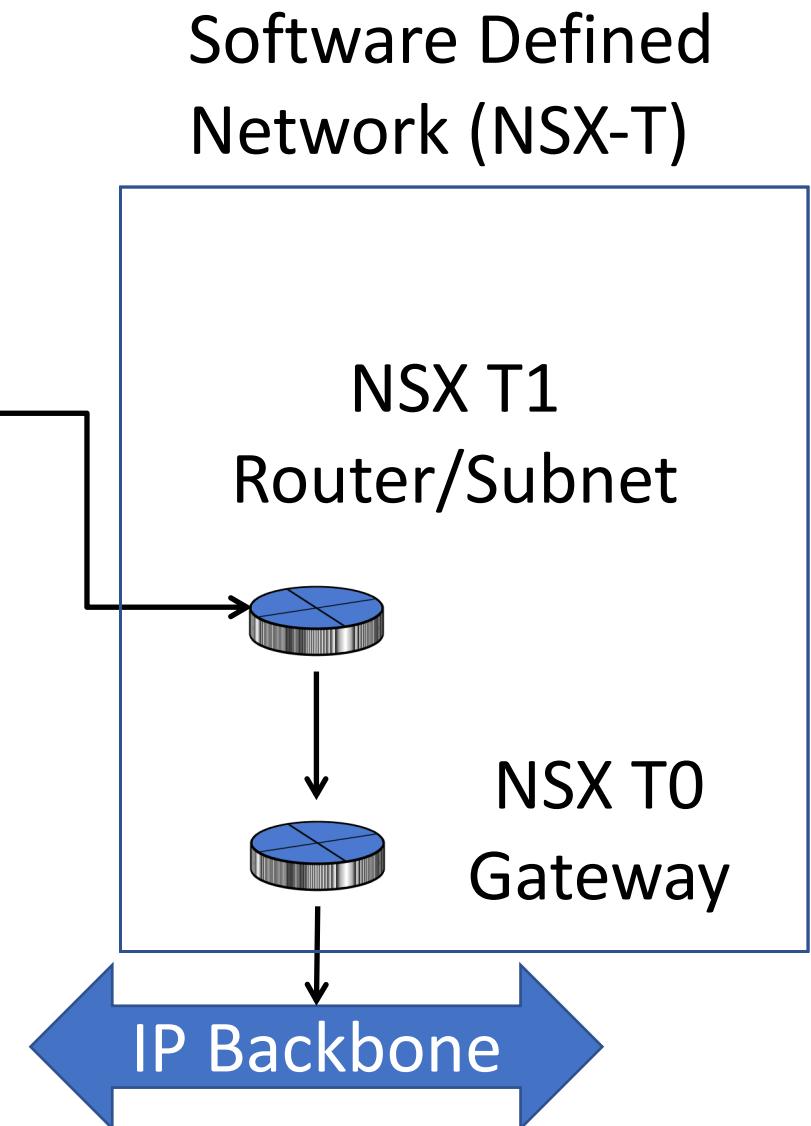

# On-Prem Infrastructure

CloudNativeCon  
Europe 2019

\*PKS=Pivotal Container Service

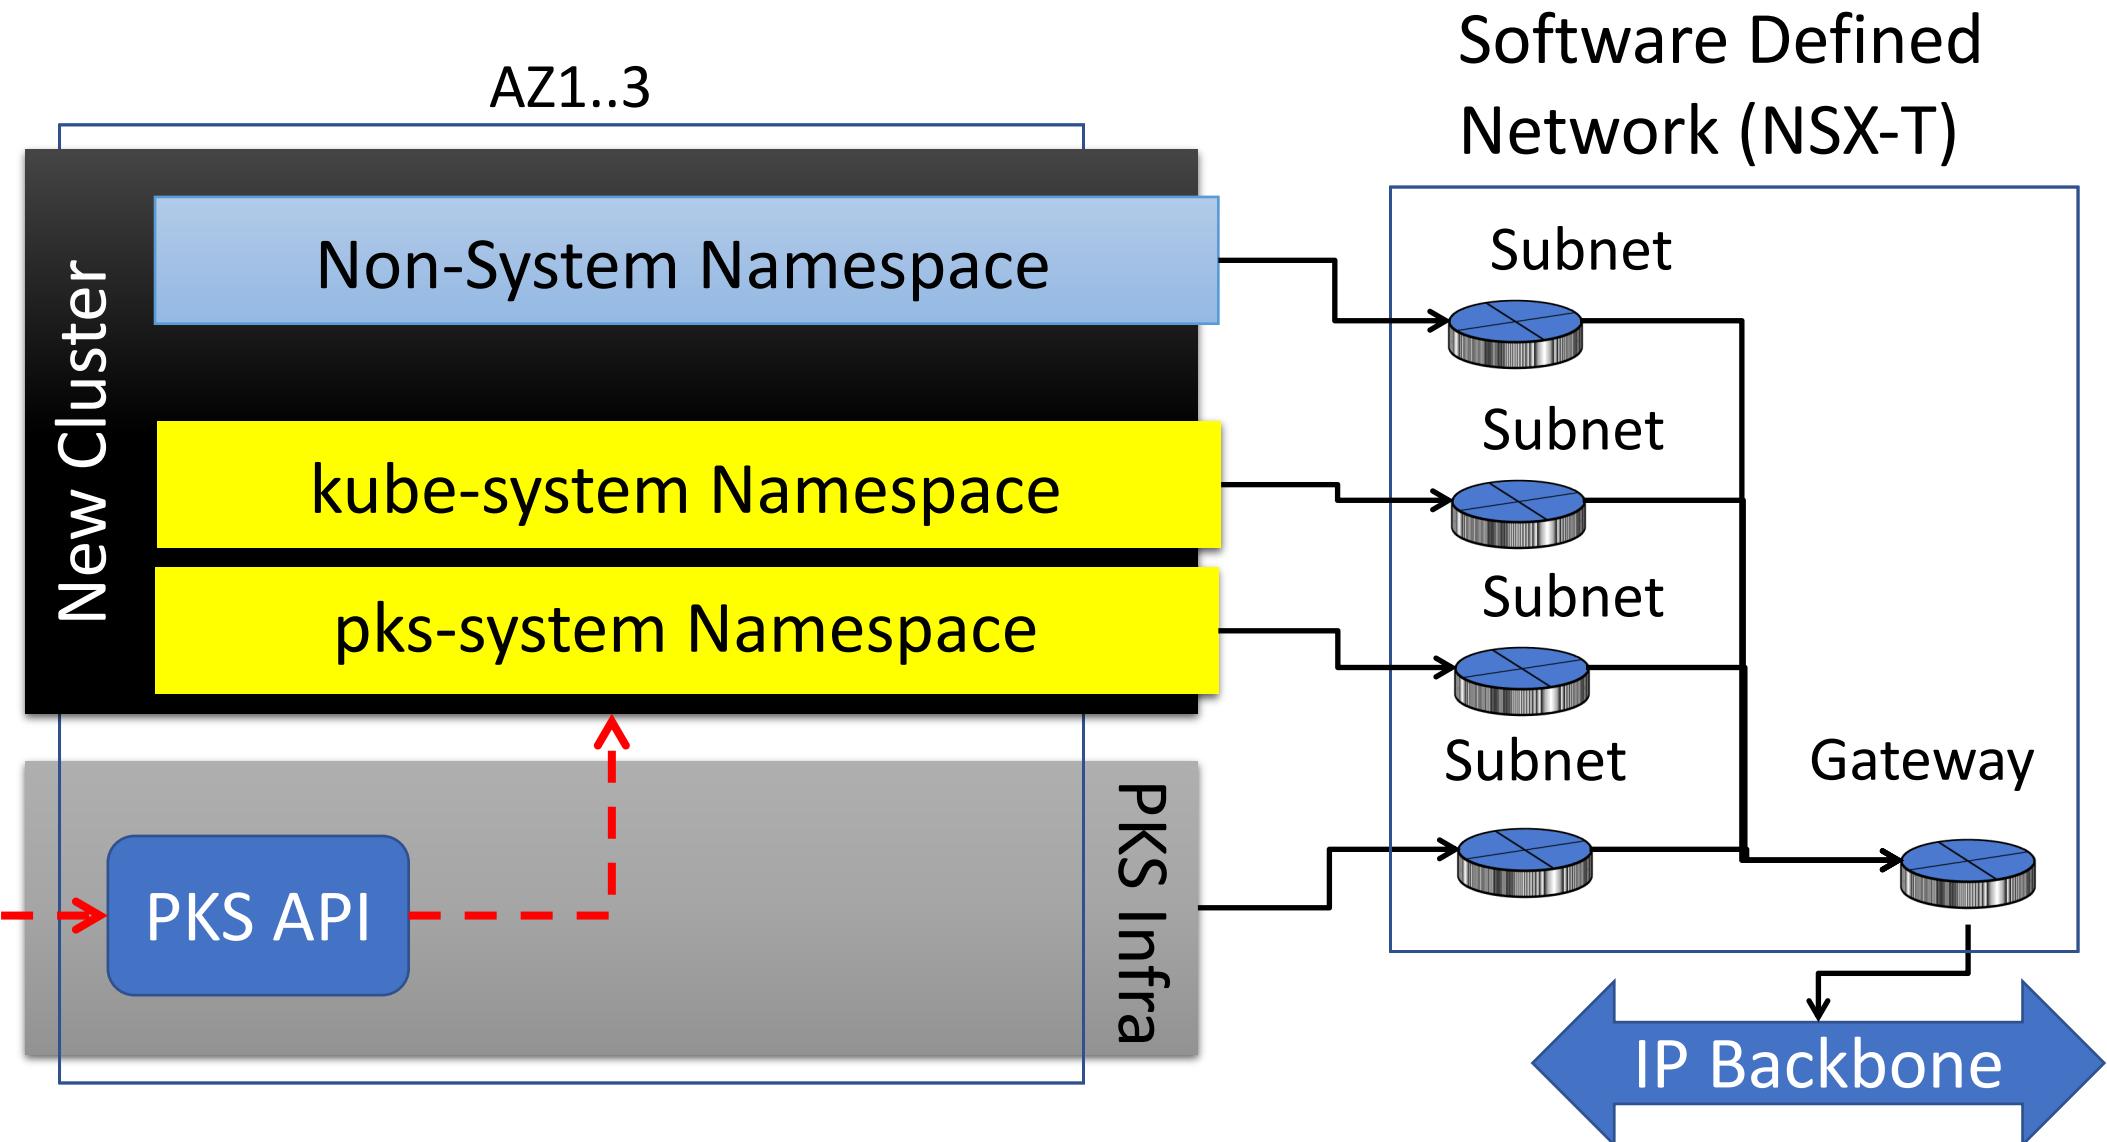

# Creating New K8s Clusters

# CRD – Cluster Spec

KubeCon

CloudNativeCon

Europe 2019

```
apiVersion: kubernetes.mc.com/v1beta1
kind: ClusterSpec
metadata:
  name: cluster-specification
spec:
  clusterURL: https://cluster-apiserver:443
  clusterName: card-loyalty
  baseFQDN: dev.example.com
  clusterType: cardLoyalty
  inheritFromTypes:
    - singleTenant
    - piiData
    - pciCompliant
  clusterNodes: 10
  clusterPlan: medium
```

```
apiVersion: kustomize.config.k8s.io/v1beta1
kind: Kustomization
resources:
- cluster-spec.yaml
vars:
- name: CLUSTER_NAME
  objref:
    kind: ClusterSpec
    name: cluster-specification
    apiVersion: kubernetes.mc.com/v1beta1
    fieldref:
      fieldpath: spec.clusterName
- name: CLUSTER_FQDN
...
- name: CLUSTER_URL
...
```

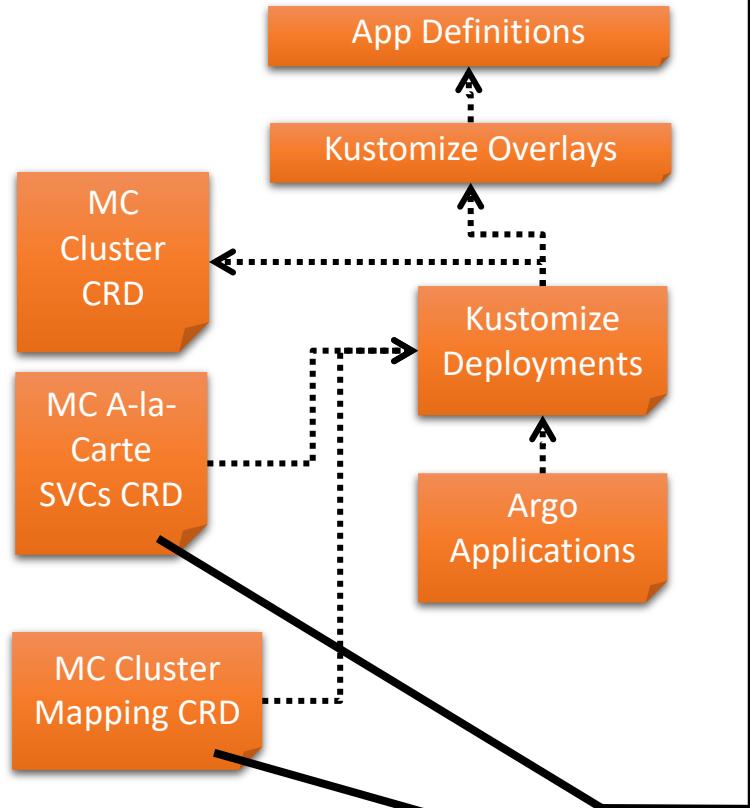

# CRD – Mapping Spec

KubeCon

CloudNativeCon

Europe 2019

```
apiVersion: kubernetes.mc.com/v1beta1
kind: MappingSpec
metadata:
  name: a-la-carte-specification
  app-name: mc-loyalty
spec:
  cardLoyalty :
    project: card-loyalty-service
  apps:
    - name: storage-service
      folderName: storage-service
      baseURL: ../../../../../../a...
      automatedSync: true
    - name: queue-service
      folderName: queue-service
      baseURL: ../../../../../../a...
      automatedSync: true
```

```
apiVersion: kubernetes.mc.com/v1beta1
kind: MappingSpec
metadata:
  name: mapping-specification
spec:
  core :
    project: core-services
  apps:
    - name: monitoring ...
    - name: logging ...
  singleTenant:
    ...
  piiData:
    project: pii-services
    apps: ...
    - name: pii-logging
  pciCompliant:
    project: pci-services
    apps: ...
```

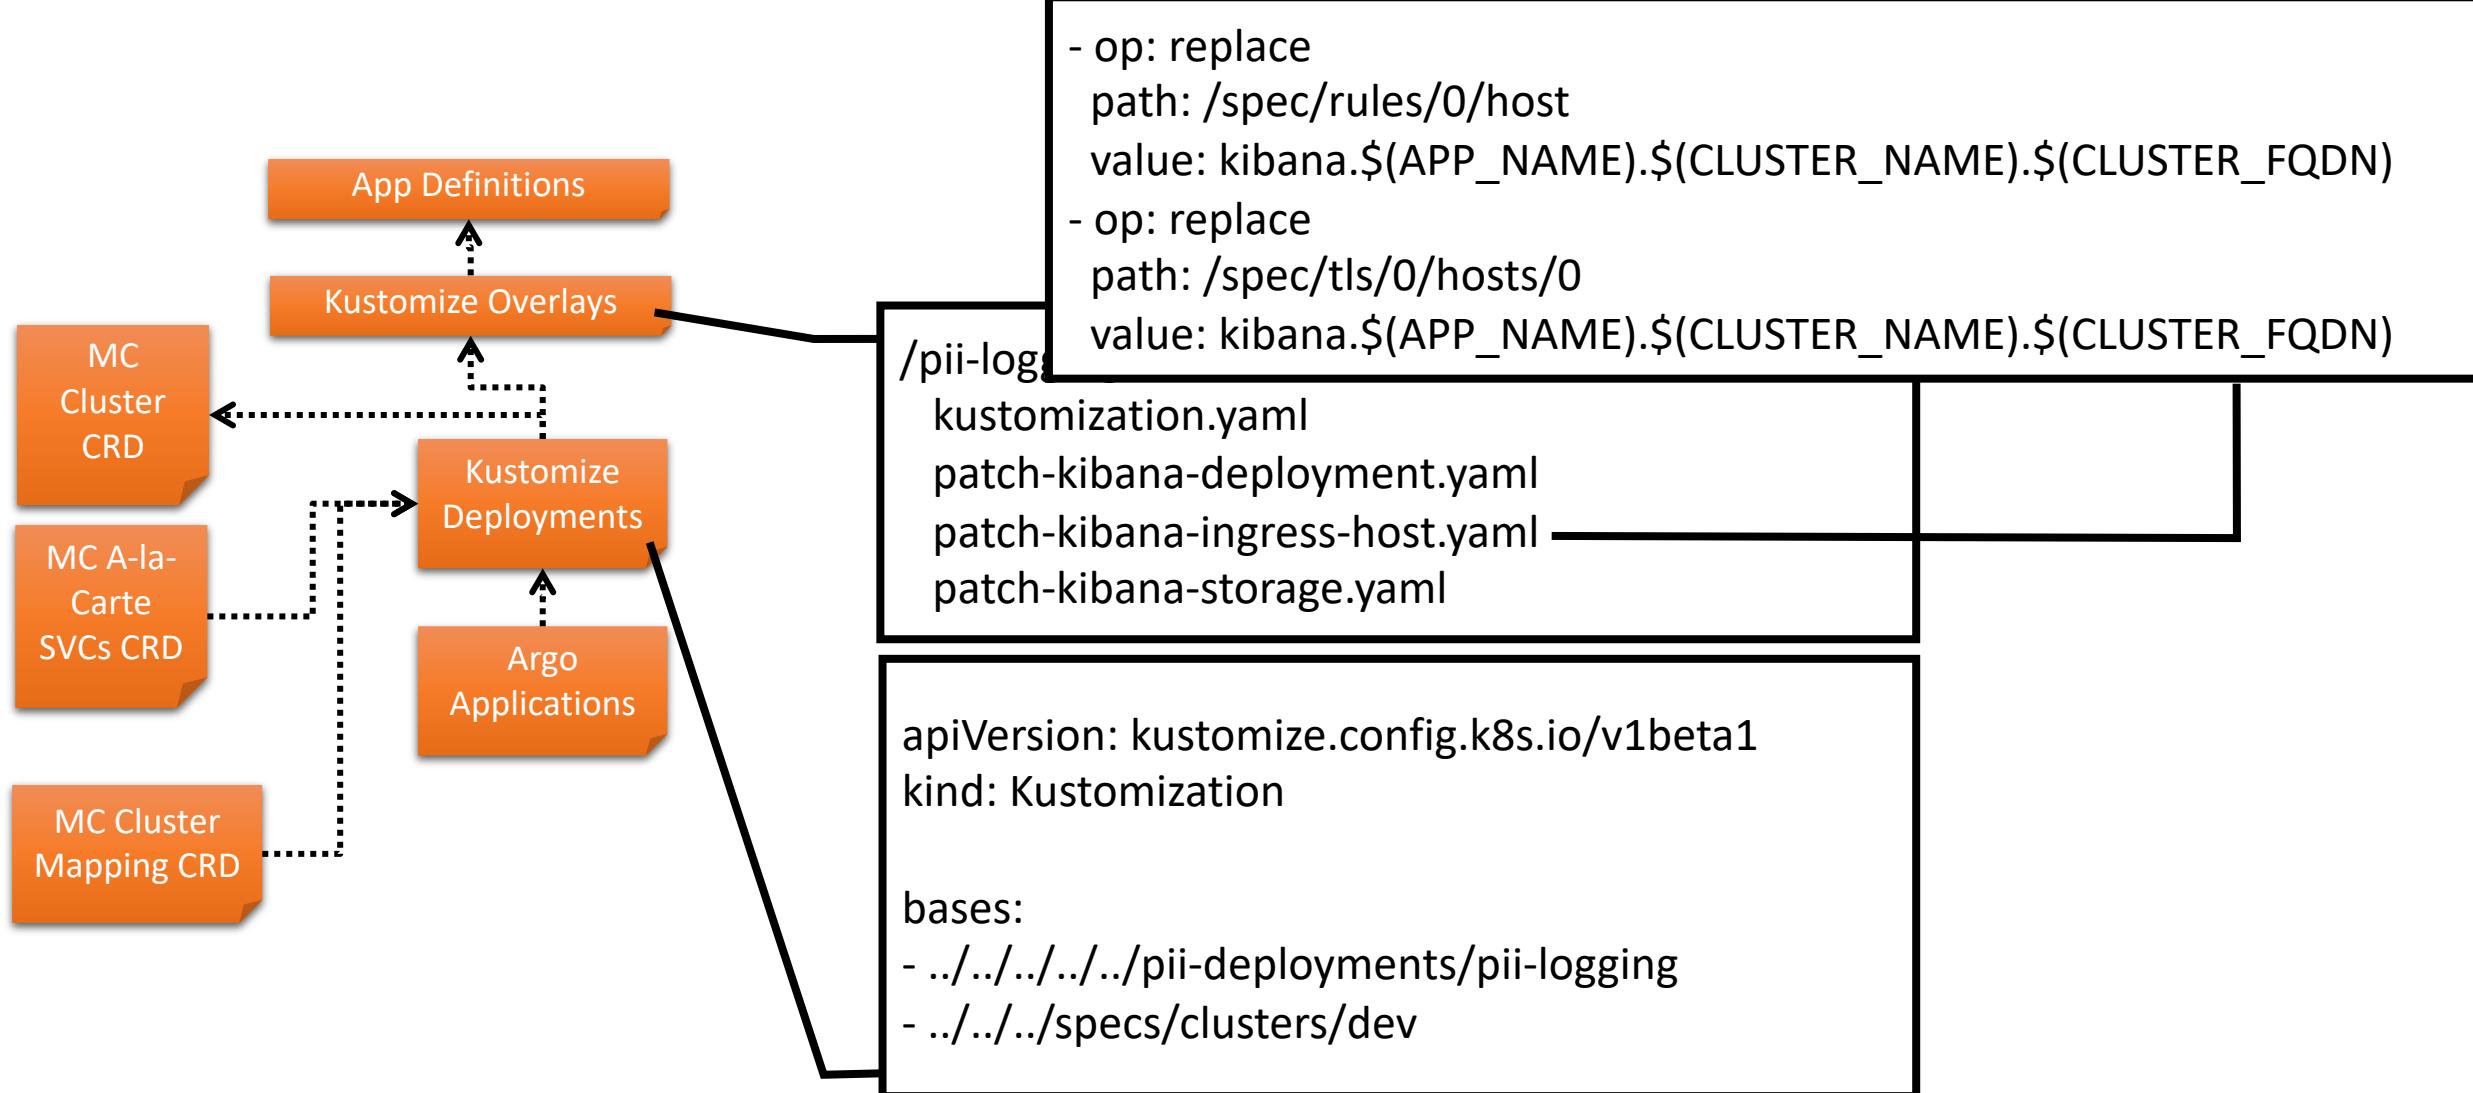

# Kustomize

# Argo CD Application

KubeCon

CloudNativeCon

Europe 2019

```
apiVersion: argoproj.io/v1alpha1
kind: Application
metadata:
  name: ${CLUSTER_NAME}-${APPLICATION_NAME}
  namespace: argocd
spec:
  destination:
    namespace: ${APPLICATION_NAMESPACE}
    server: ${CLUSTER_URL}
    project: ${PROJECT_NAME}
  source:
    path: environments/dev/deployments/${CLUSTER_NAME}/${APPLICATION_NAME}
    repoURL: https://some-git-repo.com/kube_environments.git
    targetRevision: HEAD
```

# Future Plans

KubeCon

CloudNativeCon

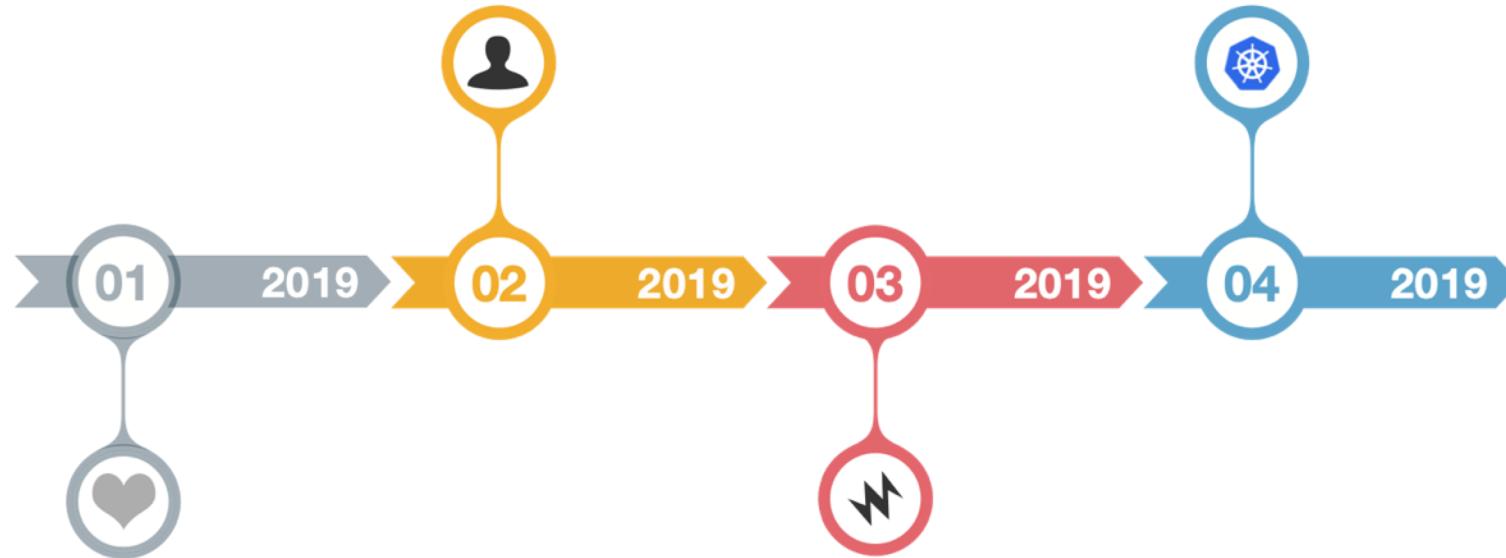

Europe 2019

## Improve Onboarding

Improve tenant experience  
Automation enhancements

## KubeCon US

Present updates  
Share implemented tool

### Tenant Management

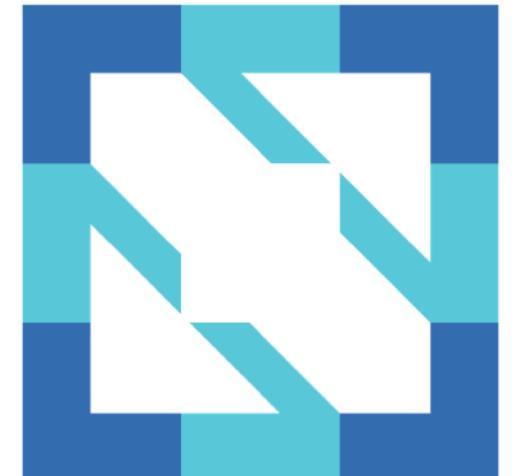

Tenant Isolation  
Extend base services  
Custom dashboards

### Application Rollout

UI for tenant on boarding  
Simplify a la carte selection

# Takeaways

- Security
- Pattern from common needs
- GitOps
- Leverage CNCF upcoming technologies
  - Cluster API
  - Multi-tenancy SIG
